# Exploring Data 

1.1 Displaying Distributions with Graphs YMS3e

## AP Stats at LSHS

Mr. Molesky

## Case Study

- Neilsen Ratings
- Read the study on page 37.
- What do you observe? Does one network appear to "win" the ratings race?
- How can we get a better sense of which network has the best ratings?
- How can Statistics help us understand this data?

## Exploratory Data Analysis

- Exploratory Data Analysis:
- Statistical practice of analyzing distributions of data through graphical displays and numerical summaries.
- Distribution:
- Description of the values a variable takes on and how often the variable takes on those values.
- An EDA allows us to identify patterns and departures from patterns in distributions.

## Categorical Data

- Categorical Variable:
- Values are labels or categories.
- Distributions list the categories and either the count or percent of individuals in each.
- Displays: BarGraphs and PieCharts
MP3 ownership

|  | AgeGroup | PctMP3 |
| :---: | :--- | ---: |
| 1 | $12-17$ | 27 |
| 2 | $18-24$ | 18 |
| 3 | $25-34$ | 20 |
| 4 | $35-44$ | 16 |
| 5 | $45-54$ | 10 |
| 6 | $55-64$ | 6 |
| 7 | $65+$ | 2 |
|  |  |  |

## Beware of Bad Graphs!

What is wrong with this graph? Let us count the ways...

## Quantitative Data

- Quantitative Variable:
- Values are numeric - arithmetic computation makes sense (average, etc.)
- Distributions list the values and number of times the variable takes on that value.
- Displays:
- Dotplots
- Stemplots
- Histograms
- Boxplots

Only organized Data can Illuminate!
Your goal is to make neat, organized, labeled graphs that display the distribution of data effectively and provide an insight into patterns and departures from patterns.

## Dotplots

- Small datasets with a small range (max-min) can be easily displayed using a dotplot.
- Draw and label a number line from min to max. [] Place one dot per observation above its value. [- Stack multiple observations evenly.
US Womens Soccer

|  | goals |
| :---: | ---: |
| 1 | 3 |
| 2 | 0 |
| 3 | 2 |
| 4 | 7 |
| 5 | 8 |
| 6 | 2 |
| 7 | 4 |
| 8 | 3 |
| 9 | 5 |
| 10 | 1 |
| 11 | 1 |
| 12 | 4 |
| 13 | 5 |
| 11 | 2 |

34 values
ranging from 0 to 8 .

US Womens Soccer
Dot Plot :

## Stemplots

- A stemplot gives a quick picture of the shape of a distribution while including the numerical values.
(-) Separate each observation into a stem and a leaf.
- eg. $14 \mathrm{~g} \rightarrow 1|4 \quad 256->25| 6 \quad 32.9 \mathrm{oz} \rightarrow 3219$
- Write stems in a vertical column and draw a vertical line to the right of the column.
- Write each leaf to the right of its stem.

## Stemplots

- Example1.4, pages 42-43
- Literacy Rates in Islamic Nations

Literacy

|  | Country | FemPct | MalePct |
| :---: | :--- | ---: | ---: | ---: |
| $\mathbf{1}$ | Algeria | 60 | 78 |
| $\mathbf{2}$ | Bangladesh | 31 | 50 |
| $\mathbf{3}$ | Egypt | 46 | 68 |
| $\mathbf{4}$ | Iran | 71 | 85 |
| $\mathbf{5}$ | Jordan | 86 | 96 |
| $\mathbf{6}$ | Kazakhstan | 99 | 100 |
| $\mathbf{7}$ | Lebanon | 82 | 95 |
| $\mathbf{8}$ | Libya | 71 | 92 |
| $\mathbf{9}$ | Malaysia | 85 | 92 |
| $\mathbf{1 0}$ | Morocco | 38 | 68 |
| $\mathbf{1 1}$ | Saudi Arabia | 70 | 84 |
| $\mathbf{1 2}$ | Syria | 63 | 89 |
| $\mathbf{1 3}$ | Tajikistan | 99 | 100 |
| $\mathbf{1 4}$ | Tunisia | 63 | 83 |
| $\mathbf{1 5}$ | Turkey | 78 | 94 |
| $\mathbf{1 6}$ | Uzbekistan | 99 | 100 |
| $\mathbf{1 7}$ | Yemen | 29 | 70 |
|  |  |  |  |

## Male \% <br> Female \% <br> $$
\begin{array}{r} 22456 \\ 0 \\ 0 \end{array}
$$

$$
\text { Key: } 2 \mid 9=29 \%
$$

## Stemplots

- Note: Stemplots do not work well for large data sets
- Back-to-Back Stemplots: Compare datasets
- Splitting Stems: Double the number of stems, writing 0-4 after the first and 5-9 after second.

$$
\begin{array}{l|ll|l} 
& & 2 & 0112234 \\
2 & 0112234889 & 2 & 889 \\
3 & 1223678 & 3 & 1223 \\
4 & 06779 & 3 & 678 \\
5 & 125 & 4 & 0 \\
6 & 01798 & 4 & 6779 \\
& 5 & 12 \\
& 5 & 5 \\
& 6 & 01 \\
& 6 & 798
\end{array}
$$

## Histograms

- Histograms break the range of data values into classes and displays the count/\% of observations that fall into that class.
[] Divide the range of data into equal-width classes. (]) Count the observations in each class - "frequency"
- Draw bars to represent classes - height = frequency
(-) Bars should touch (unlike bar graphs).

## Histograms

Table 1.3 IQ test scores for 60 randomly chosen fifth-grade students

| 145 | 139 | 126 | 122 | 125 | 130 | 96 | 110 | 118 | 118 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 101 | 142 | 134 | 124 | 112 | 109 | 134 | 113 | 81 | 113 |
| 123 | 94 | 100 | 136 | 109 | 131 | 117 | 110 | 127 | 124 |
| 106 | 124 | 115 | 133 | 116 | 102 | 127 | 117 | 109 | 137 |
| 117 | 90 | 103 | 114 | 139 | 101 | 122 | 105 | 97 | 89 |
| 102 | 108 | 110 | 128 | 114 | 112 | 114 | 102 | 82 | 101 |

| Class | Count | Class | Count |
| ---: | :---: | :--- | ---: |
| 75 to 84 | 2 | 115 to 124 | 13 |
| 85 to 94 | 3 | 125 to 134 | 10 |
| 95 to 104 | 10 | 135 to 144 | 5 |
| 105 to 114 | 16 | 145 to 154 | 1 |

- Describe the SOCS
- What do these data suggest?

## EDA Summary

- The purpose of an Exploratory Data Analysis is to organize data and identify patterns / departures.
\& PLOT YOUR DATA - Choose an appropriate graph
Look for overall pattern and departures from pattern
Shape \{mound, bimodal, skewed, uniform\}
Outliers \{points clearly away from body of data\}
Center \{What number "typifies" the data?\}
Spread \{How "variable" are the data values?\}
